PROFESSIONAL SUMMARY

Motivated Data Engineer with 1.7+ years of professional experience at Tata Technologies, specializing in real-time data processing and streaming architectures. Proficient in building scalable data pipelines using Apache Kafka, PySpark, Databricks, and MySQL. Skilled in Python, SQL, and cloud technologies with hands-on expertise in ETL pipeline design, schema evolution, and Delta Lake integration. Passionate about building reliable, high-throughput data systems that drive real-time analytics and business decision-making.

TECHNICAL SKILLS

Programming Languages: Python, SQL
Data Engineering & Streaming: Apache Kafka, KSQL, Kafka Connect, Apache Spark (PySpark), Databricks, Delta Lake
ETL & Orchestration: Apache Airflow, ETL Pipeline Design, Schema Evolution, Checkpointing
Databases: MySQL, MongoDB, OracleDB, Postgres, Hive
Data Analysis: Pandas, NumPy, Data Manipulation & Transformation
Cloud Platforms: AWS (EC2, IAM, EMR, S3)
Containerization & DevOps: Docker, Git, GitHub
Tools & Concepts: REST APIs, Real-Time Analytics, Data Modelling
Gen-AI & ML: Genie (Databricks), Ollama, Streamlit, Prompt Engineering, NL-to-SQL/DSL applications

PROFESSIONAL EXPERIENCE

Backend Solution Developer | Tata Technologies
Thane, Maharashtra | Dec 2024 - Present (1.3+ Years)

- Designed and implemented real-time data processing pipelines using Apache Kafka for highthroughput data streaming with fault tolerance and scalability.
- Developed Kafka producers and consumers in Python for data ingestion, transformation, and loading into MySQL and MongoDB databases.
- Integrated Apache Kafka with Databricks (Apache Spark) for real-time data transformation, enrichment, and analytics using Spark Structured Streaming.
- Configured Kafka Connect for seamless integration with external data sources and sinks including AWS S3, JDBC databases, and Elasticsearch.
- Implemented scalable ETL pipelines with schema evolution handling, checkpointing, and error recovery mechanisms for production reliability.
- Utilized Pandas for batch data analysis, cleaning, and manipulation workflows complementing real-time streaming processes.
- Enabled real-time dashboards and alerting systems by feeding processed streaming data to BI tools and downstream analytics systems.
- Containerized data applications using Docker for consistent deployment across development and production environments.

INTERNSHIP

Data Engineering Intern | Plutecoder Technology
Barshi, Maharashtra | 3 Months

- Gained hands-on experience with Python, SQL, and data processing fundamentals in a professional development environment.
- Assisted in building data workflows and database operations for client-facing applications.

KEY PROJECTS

Project 1: Real-Time Data Processing with Apache Kafka & MySQL

Built a robust real-time data pipeline using Kafka for streaming and MySQL for persistent storage with fault-tolerant architecture.

Key Contributions:

- Designed end-to-end data pipeline with Kafka producers publishing messages to topics and consumers processing data in real-time.
- Implemented persistent storage layer in MySQL with optimized schema design for high-write throughput from streaming sources.
- Ensured scalability and fault tolerance through Kafka partition management, consumer group configuration, and offset tracking.
- Built data validation and error handling mechanisms to ensure data integrity between streaming and storage layers.

Tech Stack: Apache Kafka, Python, MySQL, Docker

Project 2: Real-Time Data Processing with Apache Kafka & Pandas

Integrated Kafka streaming with Pandas for dynamic data workflows enabling real-time analytics and ETL processing.

Key Contributions:

- Developed Python-based Kafka producers and consumers with Pandas integration for real-time data transformation and analysis.
- Built scalable ETL workflows that consume streaming data, apply Pandas transformations, and output structured analytics-ready datasets.
- Implemented dynamic data manipulation pipelines suitable for data analytics, reporting, and real-time monitoring use cases.

Tech Stack: Apache Kafka, Python, Pandas, Docker

Project 3: Real-Time Data Processing with Apache Kafka & Databricks

End-to-end streaming pipeline using Kafka, Kafka Connect, and Databricks for real-time ingestion, transformation, and analytics.

Key Contributions:

- Designed real-time data pipeline ingesting streaming data from APIs, logs, and IoT devices through Kafka into Databricks.
- Configured Kafka topics, producers/consumers, and Kafka Connect for integration with AWS S3, JDBC, and Elasticsearch sinks.
- Integrated Databricks with Spark Structured Streaming and Delta Lake for real-time data transformation, enrichment, and analytics.
- Implemented schema evolution handling, checkpointing, and error recovery mechanisms ensuring production-grade data reliability.
- Enabled real-time dashboards and alerting by feeding processed data to BI tools, improving decision-making latency significantly.

Tech Stack: Apache Kafka, Kafka Connect, PySpark, Databricks, Delta Lake, Spark Structured Streaming, AWS S3, Elasticsearch

EDUCATION

Qualification	Institute	University / Board	Year	Percentage
B.Tech	JSPM's BIT College, Barshi	DBATU University	2023	79%
HSC (12th)	Sulakhe College, Barshi	Pune Board	2019	73.54%
SSC (10th)	Jijamata Kanya Prashala, Barshi	Pune Board	2017	70.20%

LANGUAGES

English, Hindi, Marathi

DECLARATION

I do here by declare that the above information is true and complete to the Best of my knowledge and belief.
